HY-TTC 30H

The HY-TTC 30H is a compact control unit specially developed for use in cost-sensitive applications or smaller machines. The device is based on an Infineon XC22xx microcontroller and supports programming in C. With its 30 freely configurable I/Os it can be operated with a wide variety of sensors and actuators.

The 30H version is best suited for controlling proportional functions. Six out of the eight PWM outputs have integrated current measurement which means that, for example, up to three [+ more](#)
